# Agenda

- Introduction
- Cognos data module architectures
- Data set libraries
- Use cases
- Senturus overview
- Additional resources
- Q&A

# Introductions

**Pedro Ining**

Principle BI Analytics Architect  
Senturus, Inc.

**Michael Weinbauer**

Director  
Senturus, Inc.

# Poll

Which version of Cognos are you using?

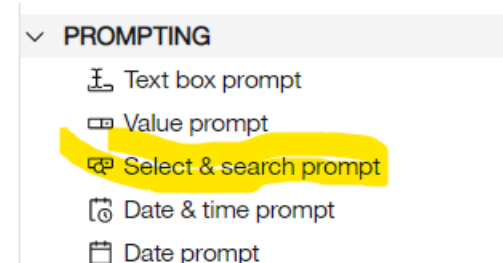

- 11.1 R7
- 11.0 - 11.1 R6
- 10 or earlier

# Cognos data modules

- Web-based end-user focused data blending, modeling, transformation tool debuted on Cognos Analytics 11.0
- IBM's response to data democratization and other tools like Tableau and Microsoft Power BI
- 11.1 **R7** significantly closed some of the technical gaps between Framework Manager and data modules
- All future development resources will be focused on data module enhancements

# What are data modules still missing?

- DMR (dimensionally modeled relational)
- Object-based security
- Model branches and merges – team-based modeling
- Parameter maps
  - Multi-lingual packages
  - Complex row-level security implementations
- FM style namespaces (but we can somewhat simulate)
- FM style packages
- Search and select prompt for reporting

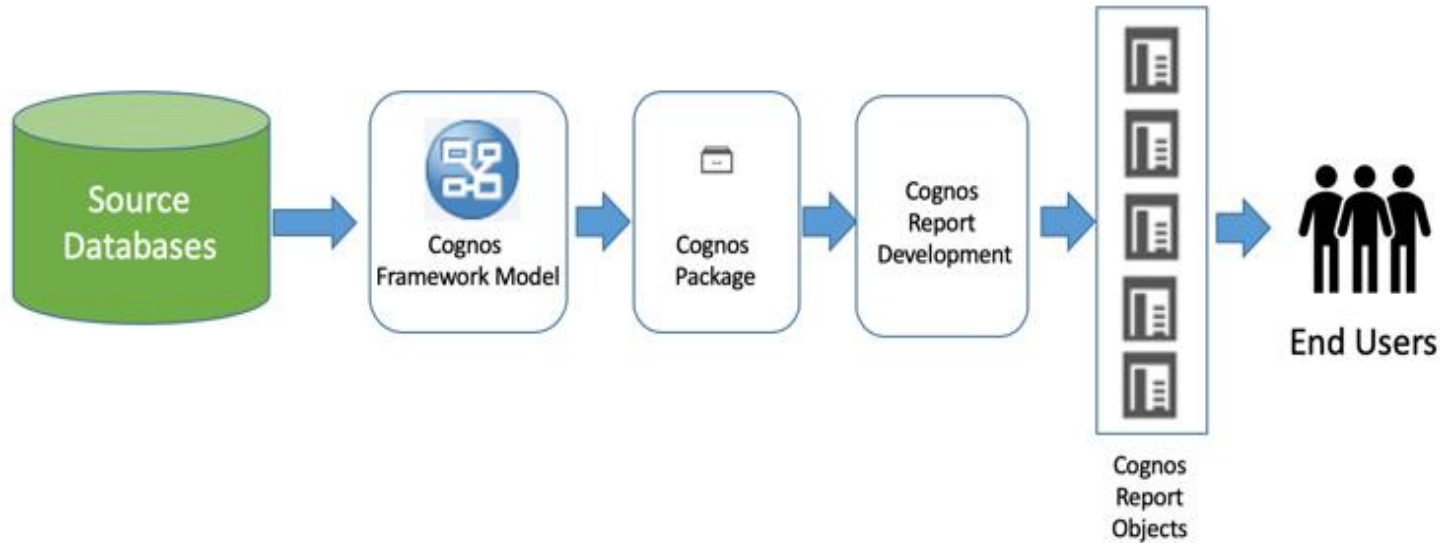

# Data module architectures

*Many ways to use data modules, but we would like to discuss potential key architectures that you can use to implement data modules*

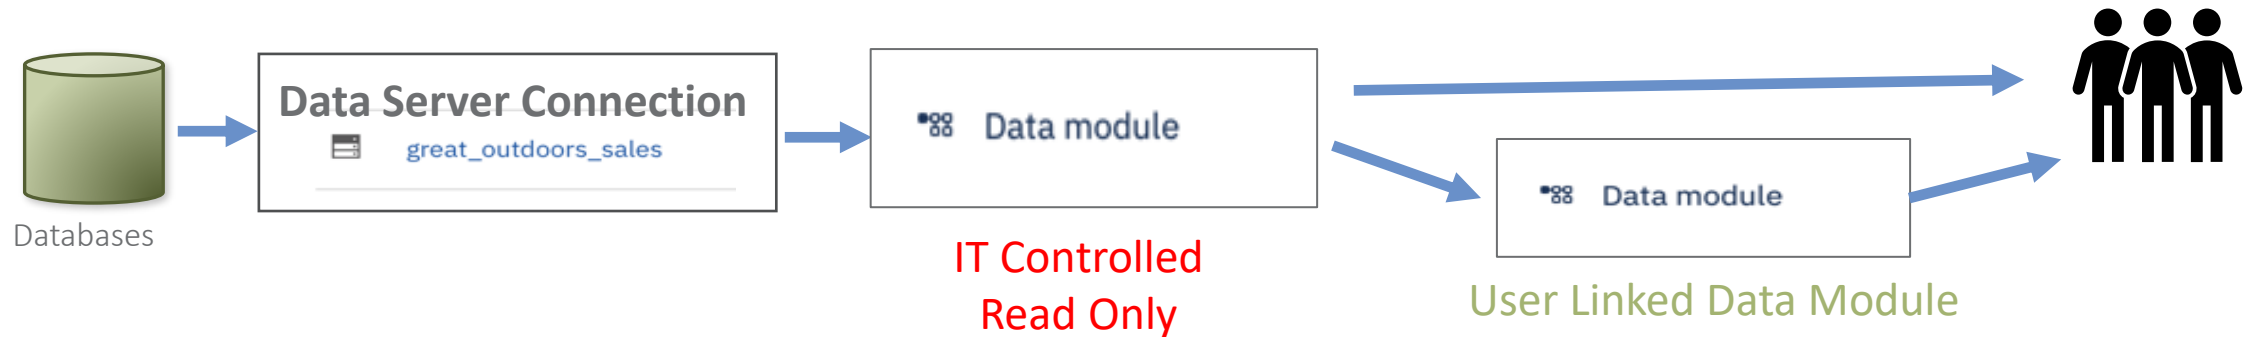

- IT driven enterprise model
- Hybrid model
- End-user driven model

# IT driven enterprise model – classic FM

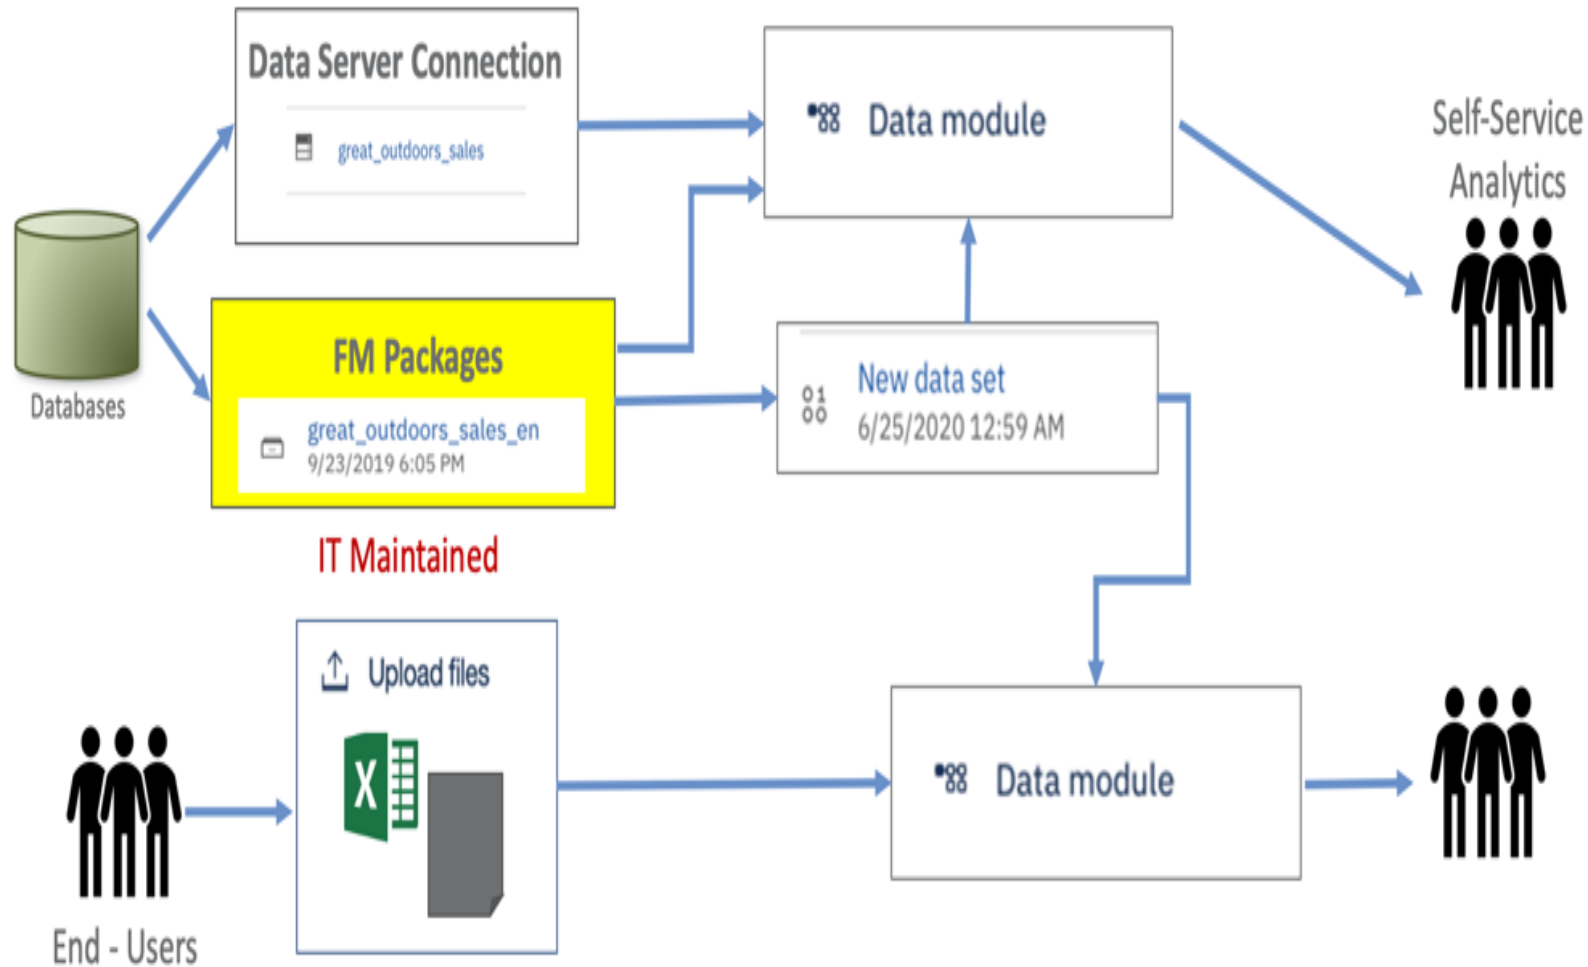

- IT gathers report requirements
- IT develops the Framework Manager model
- IT publishes packages from the Framework Manager model
- IT creates standard reports from the package
- Users may create their own ad hoc analysis reports from the package

# IT driven enterprise model – data modules

- Replace the use of FM with data modules
- For new modeling projects, they are driven by business requirements vs. modeling the entire database
- For existing legacy FM models, select business relevant subject areas in the model that need to be redesigned for better self-service
- The data module is READ ONLY and controlled by IT
- End user modelers can 'link' to this module or create data sets for their own modeling purposes

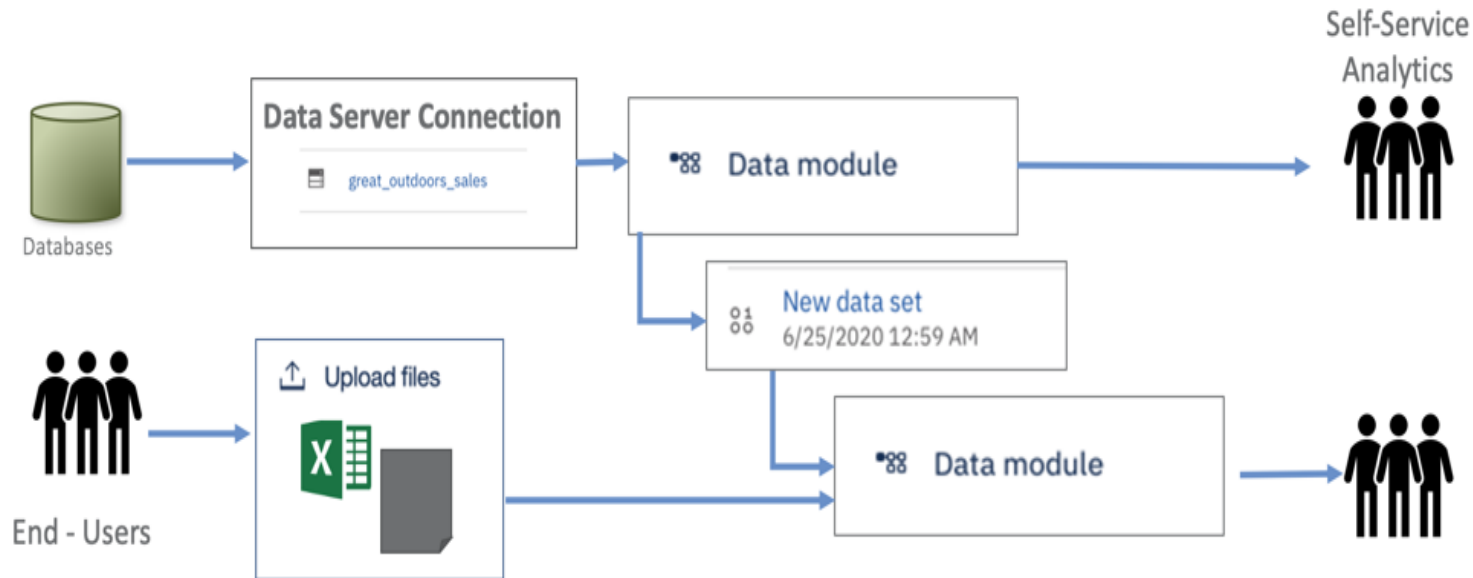

# Hybrid model

- Leverages existing legacy IT maintained FM packages
- Part of the package can be integrated into a user or IT data module
- Legacy packages could also be used to create datasets for use in data modules
- Allows use of user spreadsheet data

# End-user driven model

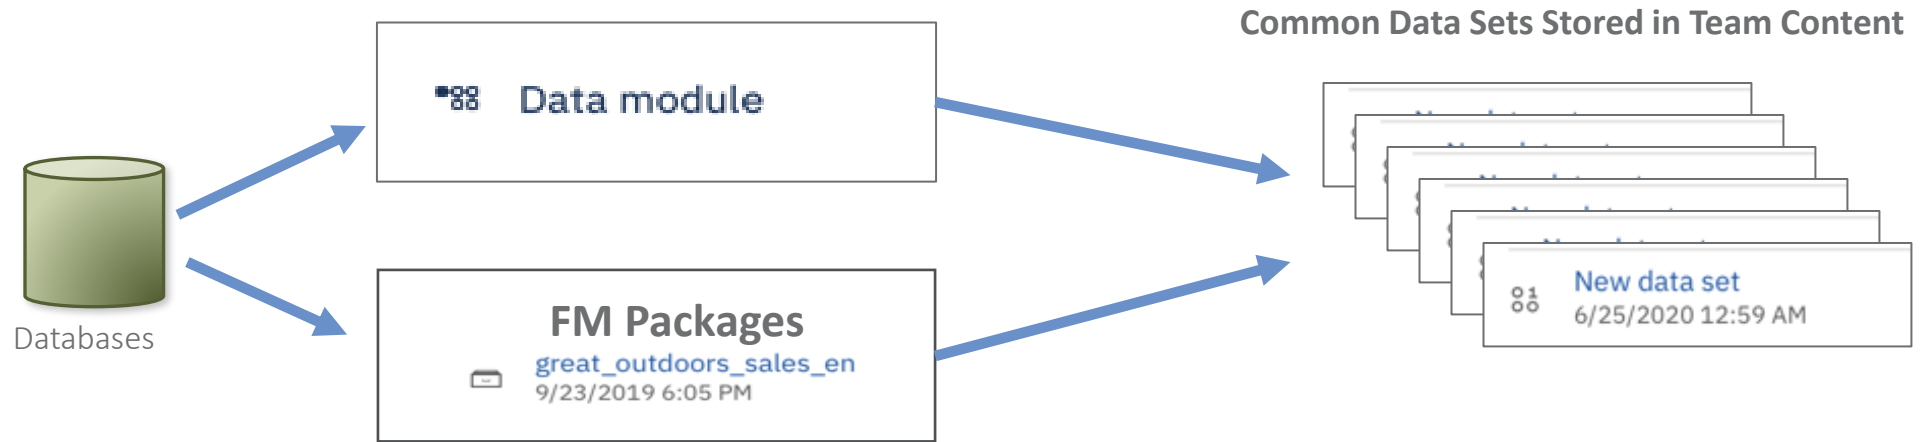

*“Point me to the data, I’ll take care of the rest...”*

- IT maintains the source databases or data warehouses
- Users utilize Cognos self-service modeling components to model the database for their specific requirements
- Users may extract subsets of data from source databases via Cognos **data sets** technology; these data sets are then integrated into data modules
- Users may upload their own privately maintained curated data that could be in the form of spreadsheets or text files<sup>13</sup>

# Data set libraries

- Common data sets for use in user or IT defined data modules
- Typically, subject specific dimensional/reference data or summarized fact data
- Not meant to store large amounts of data, typically 10-15M rows max
- Allows for better performing queries/reports
- Stored in common folder structures

# Make the shift to Cognos self service

From architectural changes to user adoption, we can help.

Get a pragmatic [roadmap](#) to self-service success.

Contact us in the chat or [info@senturus.com](mailto:info@senturus.com)

# The authority in Business Intelligence

Exclusively focused on BI,  
Senturus is unrivaled in its  
expertise across the BI stack.

# Bridging the gap

# Full spectrum BI services

Dashboards, reporting and visualizations

Data preparation and modern data warehousing

Hybrid BI environments (migrations, security, etc.)

Software to enable bimodal BI and platform migrations

BI support retainer (expertise on demand)

Training and mentoring

# A long, strong history of success

- 20+ years
- 1600+ clients
- 3000+ projects

# Join the Senturus team

We're hiring talented and experienced professionals

- Senior Cognos BI Architect/Project Manager
- Senior Microsoft BI Architect
- Senior Tableau Report Developer
- ETL Developer

See job descriptions: <https://senturus.com/why-senturus/careers/>

Send your resume to [jobs@senturus.com](mailto:jobs@senturus.com)

# Upcoming event

## **Secrets of High Performing Report Development Teams**

How BI teams build good reports consistently

Thursday, Feb. 25, 2021, 1pm PT/4pm ET

Friday, Feb. 26, 2021, 8am AEDT

## **Snowflake vs. Synapse: Comparing Analytic Data Clouds**

Demo, feature comparison & considerations

Thursday, Mar.11, 2021, 11am PT/ 2pm ET

# Complete BI training

Tailored group sessions

Mentoring

Instructor-led online courses

Self-paced learning

# Additional resources

## Unbiased product reviews

## Technical tips

## Insider viewpoints

## More on this subject

## Product demos

## Upcoming events

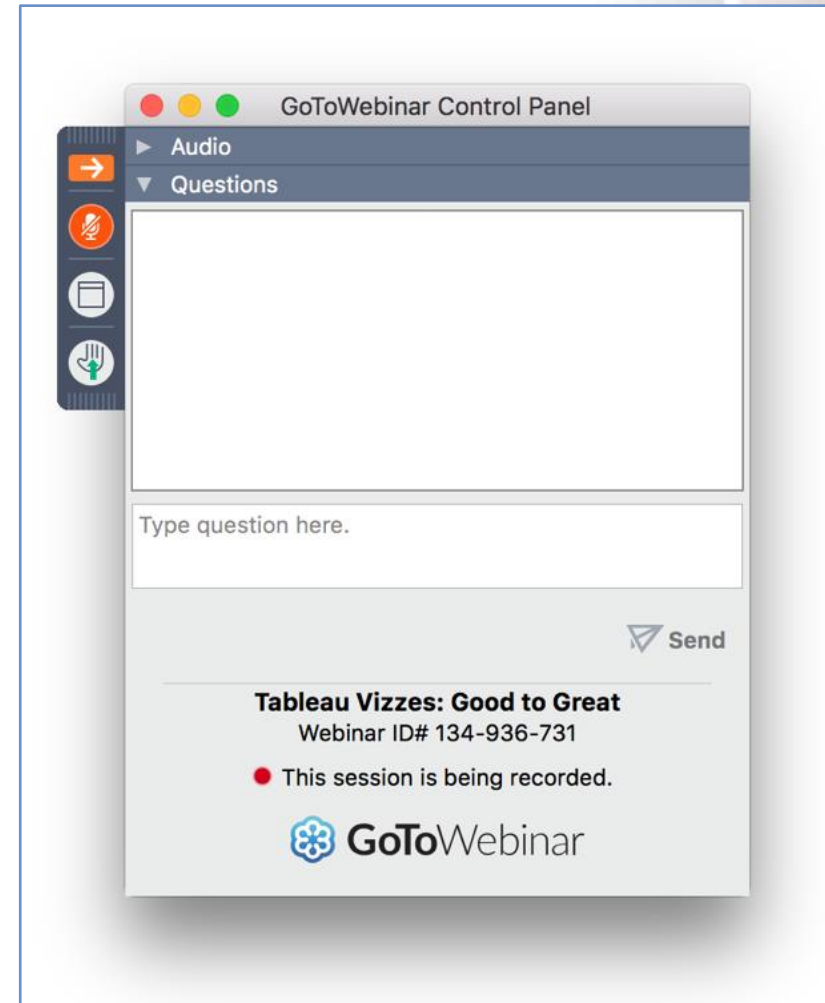

# Q & A

If your question or issue is broader than what we are able to answer today, contact us at:

[info@senturus.com](mailto:info@senturus.com)

and we will set up a free consultation.
